BINN: graphical abstract

Same forward → ±1 × surrogate eligibility fails; every other rule tested passes against a reference at 1.0000; live k-WTA transfer fails.

Secondary program (matched-architecture kill gate). The lead SHD read-out program has no graphical abstract specified.

The two passes are not ordered: against a reference at 1.0000 each reduces to “above 0.75”.

Disclose (Figure M): a broadcast-GRADED rule reaches 0.9975, and ±1 broadcast REINFORCE reaches 0.7775. Neither erases the ±1 × eligibility FAIL, and neither is a PASS.

Matched PASS does not imply live muted-θ / k-WTA G2 PASS. No claim of biology, Assembly Calculus, impossibility, or neuromorphic hardware.

Avoid: brain icons, “solved,” Assembly Calculus branding, bare “broadcast credit topology.”
